▼ Missing data 2

✓ #2 GET an unknown employee id returns 404 Not Found 3ms

✓ #1 POST with firstName/lastName omitted returns 400 Bad Request — there is no bean validation layer, so the database's own NOT NULL constraint is what ultimately rejects it

▼ Search 2

✓ #1 list() with a blank query returns every employee 65ms

✓ #2 list() with a search term filters by name or employee number 1ms

▼ Status toggle 2

✓ #1 setActive() flips the flag and records an audit entry 8ms

✓ #2 setActive() throws for an unknown employee and never touches the audit log 1ms

▼ Update in place 1

✓ #1 PUT /api/employees/{id}
